

intranet application

Let your business
get more out of
the internet.

Intranet Application

Companies' strategic advantage depends on the ability to access critical information from anywhere, at anytime. I- Matrix can help you create an Intranet or Extranet framework and develop robust information management system. We will create a strong foundation for your corporate knowledge, project or document management, business-to-business extranet, decision support system and more.

Intranets run on the standard Internet protocols and technologies (TCP/IP, HTTP, and HTML) that are used for the World Wide Web. This allows companies to use the same types of servers and browsers, that they are currently using to access the WWW, for internal applications and distributed information over their existing LAN.

The same technology is used internally and externally. This can translate into huge savings by using existing Web technology and inexpensive -or free - browser software instead of paying for a software program, which allows individuals to communicate across networks. Moreover, because intranets are essentially just internal, non-public Web sites, most employees are already familiar with the Web's interface and there is little or no learning curve.

Our intranet/extranet applications will help you streamline and automate workflow, collect information on-line, report on data from multiple systems and manage content and documents for multiple departments with centralized data management.

Boost Your Business Productivity with the I-Matrix Intranet Solution.

Below are a few of the many cost-effective applications possible on an intranet:

- Centralized corporate data repository to share information based on access rights.
- Online training materials
- Sales presentations
- Product specifications
- Vendors/ Partners information management
- Employee development
- Corporate policies and procedures
- Company mission and goals
- Corporate phone directory
- Product / Project information
- Corporate newsletters
- Internal corporate announcements
- Job postings
- Annual reports
- Internal forms management

Extend your intranet via the Web to access your information anywhere anytime.

Benefits of Intranet

Workforce Productivity

Intranets can help users to locate and view information faster and use that accordingly. With the help of its web browser interface, users can access data held in database the organization wants to make available, anytime. It helps employee ability to perform their jobs faster, more accurately, and with confidence that they have the right information. It also helps to improve the services provided to the customers.

As the latest information and documents are available to authorized user, productivity and performance increases comparatively. Team members need not to wait, for sending or retrieval of specific information.

Cost-Effective

Users can view information and data via web-browser rather than maintaining physical documents such as procedure manuals, internal phone list and requisition forms. Every user views same information within the Intranet as per the hierarchy standard, there is no hidden policy, which implements the transparency in the real terms.

Information Management with the Latest Content

Web publishing allows knowledge to be maintained and easily accessed throughout the company using Web technologies. Because each business unit can update the online copy of a document, the most recent version is always available to employees using the intranet.

Business Operations and Management

Intranets are being used as a platform too, for developing and deploying applications to support business operations and decisions across the enterprise.

Completely
web-based and
fully protected
through login
name / password.

Time

With intranets, organizations can make more information available to employees on a "pull" basis (i.e., employees can link to relevant information at a time which suits them) rather than being deluged indiscriminately by emails.

Communication

Intranets can serve as powerful tools for communication within an organization. From a communication standpoint, intranets are useful to communicate strategic initiatives that have a global reach throughout the organization. The type of information that can easily be conveyed is the purpose of the initiative, which is driving the initiative, results achieved to date. By providing this information on the intranet, staffs have the opportunity to keep up-to-date with the strategic focus of the organization.

Benefits from Our Expertise
